

Smooth and Precise Motion Control

Multiple-Axis Robotics

The Benefits of Electric Actuators

The smooth and accurate motion of Exlar's linear actuators, combined with today's servo technology, make multiple axis robotic applications easier to implement and more efficient than other actuation solutions.

Ideal Replacement for Fluid Power Actuators

Forget fluid pumps and oil leaks. Installation and maintenance of an Exlar electro-mechanical control system is nearly trouble-free, more robust than ball screw systems and considerably less expensive than a fluid based system.

With the force of hydraulics and the speed of pneumatics, Exlar's linear actuators offer an integrated, compact, high performance package. Additionally, the integrated design and elimination of fluid power makes the system virtually maintenance-free.

Why Choose Exlar?

Exlar actuators differ from other actuators on the market with the use of a high performance satellite planetary roller screw. Fully utilizing the physics of power and motion, roller screws are unmatched at converting rotary torque into linear motion. Unlike acme or ball screws, roller screws are capable of carrying heavy loads, allowing rotational speeds in excess of 5000 rpm for thousands of hours in the most arduous conditions. This makes roller screws the ideal choice for demanding, continuous-duty environments.

GSX Series linear actuators provide smooth and accurate motion in a compact, completely sealed package.
